EXPERIENCE (PLEASE REQUEST REFERENCES OR SOURCE CODE)

TCT Networks (Contractor)

Senior Mobile Software Engineer

January 2015 - July 2020

Fully Remote

- Maintain senior level problem solving skills and technical knowledge by staying on the leading edge with emerging technical solutions and design techniques.
- Significantly reduce codebase across platforms by utilizing React Native for [Android](#) and [iOS](#)
- Began implementing GraphQL solution to consolidate API calls across various clients
- Build green field and manage media catalog and streaming applications on [Android devices](#), [tablets](#), [Android TV](#) and [iOS](#) using native Kotlin, Java and Swift
- Monitor and fix application bugs using Sentry
- Interface with Brightcove APIs for displaying and streaming live and on-demand content

Self-Employed Software Contractor (Multiple Clients)

Mobile & Web Developer

May 2017 - Present

Fully Remote

- Demonstrate expert skills in JavaScript, React, React Native, Kotlin, Java, and SwiftUI with knowledge in GraphQL and PHP in order to exceed client goals
- Communicate with clients to understand and implement requirements of mobile and web applications
- Collaborate with designers to create and then implement mockups in code
- Develop green field React Native applications including [Cookies By Us](#), [Breed Up](#), and [Beauty Time](#)

Omicron Media

Android Developer

January 2017 - February 2018

Winter Park, FL / Partial Remote

- Refactor outsourced code for [Halogen application](#) that was very poorly written to use Clean Architecture with MVP outer layer strategies
- Moderate use of JIRA for bug tracking, issue tracking and project management functions
- Excellent communication and teamwork working on-site and remote in an agile environment
- Use git flow to maintain and organize code changes

ASG @ Google

Android Subject Matter Expert & Trainer

January 2016 - December 2016

Mountain View, CA / Fully Remote beg. July

- Significantly improve clarity for students and quality of [code](#) for the [Android Fundamentals course created in conjunction between Google and Udacity](#).
- Create [interactive TODOs for students](#) to easily follow along in the IDE
- Create python script to help in cleanly applying fixes to the delicate commit history and to create the folder structure for the students
